EventFlowz Functional Specifications

Version No.	Date	Author	Notes
1.0	October 29, 2025	Bryant Glover	

Overview

EventFlowz is a full-stack event management application that streamlines how events are planned, tracked, and executed from initial inquiry through completion. The system centralizes event data, contact management, proposals, payments, and milestones into a single platform.

Its core purpose is to improve efficiency and accuracy across event workflows by automating manual processes and ensuring that all users operate within a unified, role-based environment. EventFlowz uses a permission-based access system that defines specific capabilities for Administrators, Team Members, Vendors, and Clients, ensuring secure and organized collaboration across all stages of event management.

The platform integrates intake forms, scheduling tools, proposals, and payment tracking to provide a consistent, end-to-end management experience. It is designed for scalability and flexibility, allowing future integration with automation tools, third-party APIs, and advanced reporting features to support continued operational growth.

Scope

The initial scope of EventFlowz includes the development of a fully functional web application that supports the end-to-end lifecycle of event management. The system enables users to create, manage, and track events through integrated modules for event intake, proposals, payments, milestones, and communication.

This release focuses on the following core components:

- **User Authentication:** Secure login via email/password or Google SSO with role-based permissions.
- **Dashboard and Events Table:** Centralized access to upcoming events, leads, and revenue metrics.
- **Intake Form:** Multi-step event inquiry form for collecting client and event details.
- **Event Record Summary:** Comprehensive view of event information, payments, contacts, and milestones.

- **Proposals and Payments:** Tools for creating, sending, and tracking client proposals and payment schedules.
- **Notes and Tasks:** Internal collaboration tools for documenting updates and managing event workflows.
- **Settings:** Administrative controls for onboarding users, configuring event fields, and managing automated notifications.

Future versions will expand functionality with features such as timeline collaboration, vendor and client portals, analytics dashboards, and API integrations for calendar, payment, and CRM systems.

User Roles

EventFlowz implements a role-based access control (RBAC) system to ensure secure, structured collaboration between administrators, team members, vendors, and clients. Each role has defined privileges and data visibility scopes within the platform to support efficient event management and communication.

Administrator Role

Administrators manage all aspects of event operations, system configurations, financial transactions, and user assignments. This role has the highest level of permissions.

Capability	Action Type	Description
Event Management	Create / Update	Create events through Intake Form; modify or cancel existing events.
Settings	Update	Configure data fields on Intake Form and Event Record Summary. Configure tasks assigned to Team Members.
Team Assignments	Create / Update	Assign internal team members to specific events.
Proposals	Create / Update / Send	Create proposal templates, customize packages, and send to clients.
Contracts	Create / Update	Edit and manage client contracts through editable web-page text.
Cancellations	Cancel	Cancel proposals or contracts as needed.
Payments	Issue Refunds	Refund client payments directly from the payment dashboard.

Milestones	Advance	Advance event milestones for *all* statuses (PCM, 2CM, FCM, G2G, Review).

System Interaction Notes:
Admin actions trigger updates to event records, notification logs, and payment ledgers. These changes are logged in the audit trail for accountability.

System Role

The system performs automated actions in response to user or client activity. These actions ensure consistent communication, data entry accuracy, and milestone tracking.

Trigger Event	Automated Action
Client submits inquiry	Add new record to Events Table and create client or vendor contact associated with event
Inquiry submitted	Send email notification to Admin and assigned Team Member.
Client accepts proposal	Update event status and notify Admin/Team Members.
Client pays retainer	Update payment records and trigger milestone progression.
Admin assigns event	Send notification to assigned Team Members.

Team Member Role

Team Members handle event execution, client communication, and vendor coordination within assigned events.

Capability	Action Type	Description
Event Records	View / Filter / Sort	Filter event list by date, type, or status; sort columns by key fields.
Tasks	Update	Complete assigned event tasks and mark as done.
Proposals	View	Access client proposals for context only.
Payments	View	View client payment details (invoice number, amount, date, status).
Receipts	View	Access charge records (charged by, date, last 4 digits of card, net amount).
Vendor / Client Assignments	Create / Update	Link vendors or clients to events as applicable.
Notes	Create / Update	Add internal notes or updates to the event record.

Milestone Advancement	Advance (limited)	Advance milestones for statuses: PCM, 2CM, FCM, G2G, Review.

System Interaction Notes:
Team member actions log user ID and timestamp for audit. Limited edit rights prevent accidental modification of financial or contract data.

Vendor Role

Vendors have read-only access to assigned events for coordination and scheduling visibility.

Capability	Action Type	Description
Event Records	View	View only assigned events in the Events Table.
Filters	Search / Date Range	Filter events by name, start date, or end date.
Columns	Read-only	Event Name, Venue, Date, Type.
Event Summary	Read-only	Access summary details for assigned events only.
Notes	Read-only	Review notes for context.

Client Role

Clients interact with the system to review proposals, make payments, and access event information for their booked events.

Capability	Action Type	Description
Event Summary	View	Access event details for their own event record only.
Proposals	View / Accept	Open, review, and accept proposals sent by Admin.
Payments	Create / View	Make payments through integrated payment gateway; view payment history (invoice number, amount, date, status).
Client Assignments	Create	Add other clients (e.g., co-planners) to their event.
Vendor Assignments	Create	Suggest or assign vendors related to their event.

Access Control Matrix (Summary View)

Feature / Action	Admin	System	Team Member	Vendor	Client
Create Event	✅	🔄 (auto add)	❌	❌	❌
Edit Event	✅	❌	✅	Read-only	❌
Assign Team	✅	❌	❌	❌	❌
Assign Vendors	✅	❌	✅	❌	✅
Manage Proposals	✅	🔄 (send alerts)	Read-only	❌	View/Accept
Manage Contracts	✅	❌	❌	❌	❌
Issue Refunds	✅	❌	❌	❌	❌
Make Payments	❌	❌	❌	❌	✅
View Payments	✅	🔄 (update)	Read-only	Read-only	Read-only
Advance Milestones	✅	🔄 (auto-advance)	✅ (limited)	❌	❌
Add Notes	✅	🔄 (log activity)	✅	Read-only	❌

Web Application Pages

1.0 Login Page

Purpose

Enable secure access for users to the EventFlowz platform based on assigned roles (Admin, Team Member, Vendor, Client). Only onboarded users or those invited via event association should be able to create accounts.

Functional Requirements

Feature	Description
Authentication Options	• Email & Password login • Google SSO integration

Access Control	• Team Members and Administrators: Accounts created by Admin • Vendors and Clients: Can register *only* through invitation email triggered by event association. • Public sign-ups from main website are **disabled**.
Error Handling	• Invalid credentials should trigger an inline error message. • Attempted self-registration should display “Please contact your event administrator for access.”
Security	• Passwords encrypted with industry standard hash (bcrypt). • OAuth2 for Google SSO. • Sessions expire after 24 hours of inactivity.

2.0 Dashboard

Purpose

Provide administrators with a snapshot of organizational performance, upcoming events, and financial activity.

Functional Requirements

Widget	Description	Behavior / Interaction
Total Leads	Displays the number of events in statuses: *Inquiry, Follow-Up, ICM, or Proposal.*	Clicking redirects to a separate table showing only those statuses.
Upcoming Events	Displays all events within the current week (Mon–Sun).	Refreshes automatically every Monday; clicking redirects to filtered Events Table.
Revenue (30 Days)	Shows total revenue accumulated in the last 30 days from client payments.	Updates dynamically when payments are added or modified.

Access Control:
Only Admins and Team Members. Team Members see metrics related to their assigned events only.

3.0 Events Table

Purpose

Centralized view for managing, searching, and filtering event records.

Functional Requirements

Feature	Description
Filters	Search Bar, Event Status, Event Type, Team Member, Start Date, End Date
Columns	Event Name, Venue, Date, Type, Status, Team Member
Permissions	Admins: Full access. Team Members: Limited to assigned events.
Sorting	All columns sortable (A–Z, Z–A, or chronological).
Search Behavior	Dynamic filtering with instant table refresh; supports partial matches.

4.0 Intake Form

Purpose

Collect client and event information in a structured 3-step form to create new event records. If a field is not indicated as optional, then it is required.

Structure and Requirements

Page 1 — Client Information

Field	Type / Behavior	Validation / Notes
Services	Checkboxes: DJ + MC, L!VE Music, DJ Fusion	Multiple selections allowed
I am completing this form as	Dropdown: Client / Planner	Used to determine contact type (Client or Vendor → Planner)
Event Type	Dropdown: Wedding / Corporate / Private Party	Controls conditional field display
Estimated Investment	Dropdown: $1,800–$2,500 / $2,500–$5,000 / $5,000+	
First / Last Name	Text (55 char)	
Partner’s First / Last Name	Conditional (Wedding only)	Optional
Event Name	Conditional (Corporate only)	Optional
Email	Text	Must pass regex validation
Phone	Text	Accept numeric only; format auto-applied as (123) 456-7890

Page 2 — Event Details

Field	Type / Behavior	Validation / Notes
Event Date	Date Picker	Format: mm/dd/yyyy
Venue	Text with Google API autocomplete	Display full address (e.g., “The St. Vrain, 635 3rd Ave, Longmont, CO 80501”)
Guest Count	Number	Must be < 9999
Start / End Time	Time Picker	Hour: 1–12; Minute: 00/30; AM/PM toggle
Additional Info	Text (250 char)	Optional
How did you hear about us	Text (100 char)	Optional

Page 3 — Music Preferences

Field	Type / Behavior	Validation / Notes
Genre Selections	Checkboxes (multiple)	Add Genre button allows custom entry
Common Options	Anything Wide Variety, Country + Classic Rock, Cultural, Dance/EDM, Latin, Top 40s, Throwbacks	
Special Requests	Text (250 char)	Optional

5.0 Event Record Summary

Purpose

Provide a comprehensive event overview for Admins, Team Members, Vendors, and Clients.

Sections and Requirements

Header

- Left: Event Type tag → Event Name → “Services – Event Date” string (e.g., *DJ + MC – Saturday, June 6, 2026*).

- Right: Venue and full address.

Milestone Controls

- Admins: Advance milestones for all statuses.
- Team Members: Advance when assigned and milestone = PCM.
- Previous/Next status buttons available to both.

Event (Collapsible Section)

Field	Behavior
Event Name	Auto-generated by type (Wedding: “Client + Partner”; Corporate: custom)
Guest Count, Budget, Venue, Services	Display from Intake Form
Add-ons	Admin-selectable checkboxes: Photo Booth, Uplights, Microphones, Speaker
Music Preferences	Displays selected genres and custom entries

Payments (Collapsible Section)

Invoice No.	Amount	Due Date	Status	
2349203	$1,000	11/8/25	PAID	...
2349204	$1,000	5/10/26	UPCOMING	...

Payment Statuses:

- PAYMENT DUE
- PAID
- UPCOMING
- CANCELLED

When an administrator or team member clicks on the icon on the column on the right of Status, they can view a modal of the receipt details:

- Charged By
- Date

- Last 4 of card
- Net Amount

Contacts Section

Action	Enabled For	Behavior
Add Team Member	Admin	Opens modal to select onboarded users; sends email notification.
Add Vendor	Admin / Team Member	Opens vendor modal; email invite sent.
Add Client	Admin / Team Member / Client	Opens client modal; email invite sent.

Automatic Role Assignment:
When intake form is submitted:

- If “Planner” selected → create Vendor contact (Role = Planner)
- If “Client” selected → create Client contact

Client Modal

Field	Validation / Notes
First / Last Name	Required
Email	Must validate
Phone	Numeric only, formatted
Accountable for Payment	Dropdown: Yes / No / Optional

Vendor Modal

Field	Validation / Notes
First / Last Name	Required
Email	Must validate
Phone	Numeric only, formatted
Company	Required
Role	Dropdown: Planner / Venue Coordinator / Photographer / Caterer

6.0 Notes Tab

Purpose

Allow Admins and Team Members to document updates or internal communication.

Functional Requirements

- Rich text editor with:
  - Bullet points, numbered lists
  - Text formatting (bold, italic, underline)
  - Alignment (left, center, right)
  - Hyperlink insertion
- Auto-save draft every 30 seconds.
- Permissions: Admins & Team Members (write), Vendors (read-only)

7.0 Tasks Tab

Purpose

Assign, track, and complete event-related tasks.

Functional Requirements

Field	Description
Task	Task title
Assigned To	Assigned team member
Due Date	Based on configurable schedule (e.g., 30, 60, 90 days pre-event)
Completed Date	Auto-populates when checkbox marked complete
[Checkbox]	Checked by assigned member to mark completion

Save Tasks Button	Required for saving updates; triggers timestamped record

Admin Controls:

- Create global task templates in Settings
- Set due date frequency relative to event date
- Complete and save assigned tasks only

8.0 Proposal Modal

Purpose

Generate and send proposals to clients, including payment schedule and preview.

Step 1 — Proposal Creation

Feature	Description
Package Selector	Left panel listing packages; selection adds to right-side preview
Package Details	Name, Price, Start/End Time, Description, Service Items
Service Items	Sub-elements with icon, description
Delete Functionality	Admins can remove packages or service items

Step 2 — Review & Send

Feature	Description
Payments Table	Auto-divides total into two payments: Retainer (PAYMENT DUE, +7 days) and Upcoming (10 days before event)
Client Selection	Checkbox list of clients tied to event
Proposal Preview	Right side displays read-only view of proposal and contract
Send Function	Sends proposal via email; status updates to “Proposal Sent.”

The proposal modal is accessible to Administrators and Clients for all statuses. Team Members can access the proposal modal when the status is Accepted.

Status	Description
Draft	Proposal status after an administrator creates the proposal
Sent	Proposal status after a proposal is sent to a client
Accepted.	Proposal status after a client accepts a proposal
Cancelled	Proposal status when an administrator cancels a proposal

The system must also capture Last Modified By and Last Modified Date. These fields will be displayed in the Proposal section on the record summary.

9.0 Settings Page

Purpose

Enable administrators to configure global settings for intake forms, events, onboarding, and notifications.

Functional Areas

Section	Capabilities
Intake Form	Add/Remove fields
Event Summary	Add/Remove data fields, modify task templates
Event Tasks	Update due date frequency (30, 60, 90 days pre-event)
Onboarding	Add new Admins or Team Members via modal with: First Name, Last Name, Email, Phone, User Permission (Admin or Team Member), Role
Email Notifications	System-generated for: • Inquiry Submitted • Client Accepted Proposal • Client Paid Retainer • Event Assigned

10.0 System Notifications

Trigger Events and Corresponding Emails

Trigger	Recipients	Email Action
Inquiry Submitted	Admin	New inquiry received
Client Accepted Proposal	Admin	Proposal acceptance alert
Client Paid Retainer	Admin, Client	Payment confirmation
Event Assigned	Team Member	Assignment notification
